## Diaphragm Valve, Metal

### Construction

The manually operated GEMÜ 673P9 diaphragm valve has better tightness characteristics due to its unique seal system. It has a temperature resistant plastic handwheel. Bonnet housing and internals are made all of stainless steel. An integral optical position indicator and a seal adjuster to increase service life of the diaphragm are included as standard (diaphragm size 10 - diaphragm size 50).

### Features

- Suitable for inert and corrosive\* liquid and gaseous media
- Chemical resistance of bonnet
- CIP / SIP / COP and autoclave capabilities
- Suitable for particulate media
- Valve body and diaphragm available in various materials and designs
- Compact design (ideal when space is at a premium)
- Stepless minimum flow regulation due to seal adjuster
- External sealing by O-rings made of silicone

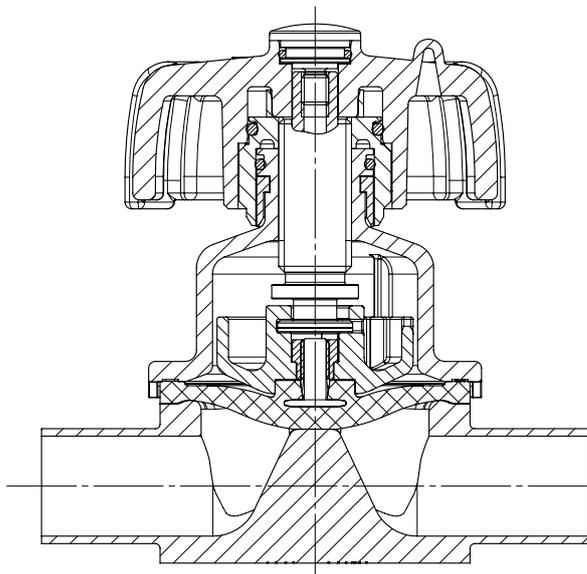

### Advantages

- Hermetic separation between medium and bonnet
- Optional flow direction
- Installation for an optimized draining is possible
- Long service life of the diaphragm due to patented seal adjuster (US-Pat. 5 377 956)
- Valve body also available in multi-port designs (M-block and T-body) or as tank bottom valve body

\* see information on working medium on page 2

Sectional view

**GEMÜ® 673P9**

## Technical data

### Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

### Temperatures

**Medium temperature** -10 to 100 °C

#### Sterilisation temperature <sup>(1)</sup>

EPDM (code 13/3A)	max. 150 °C <sup>(2)</sup> , max. 60 min per cycle
EPDM (code 17)	max. 150 °C <sup>(2)</sup> , max. 180 min per cycle
PTFE (code 52/5A)	max. 150 °C <sup>(2)</sup> , no time limit per cycle
PTFE (code 5E)	max. 150 °C <sup>(2)</sup> , no time limit per cycle
FPM (code 4/4A)	not applicable

<sup>1</sup> The sterilisation temperature is valid for steam (saturated steam) or superheated water.

<sup>2</sup> If the sterilisation temperatures listed above are applied to the EPDM diaphragms for longer periods of time, the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly.

This also applies to PTFE diaphragms exposed to high temperature fluctuations.

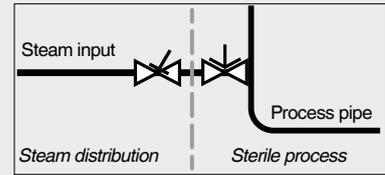

PTFE diaphragms can also be used as moisture barriers; however, this will reduce their service life.

The maintenance cycles must be adapted accordingly.

GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution.

The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time:

A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

**Ambient temperature** 0 to 60 °C

Diaphragm size	Nominal size	Max. operating pressure [bar]	
		EPDM / FPM	PTFE
MG	DN		
8	4 ... 15	10	6
10	10 ... 20	10	6
25	15 ... 25	10	6
40	32 ... 40	10	6
50	50	10	6

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values.

Information on operating pressures applied on both sides and for high purity media on request.

### Kv values [m<sup>3</sup>/h]

MG	DN	DIN Code 0	EN 10357 Series B Code 16	EN 10357 Series A Code 17	DIN 11850 Series 3 Code 18	SMS 3008 Code 37	ASME BPE Code 59	ISO 1127 / EN 10357 Series C Code 60

	40	29.3	30.9	30.9	30.9	30.2	29.5	32.8
50	50	46.5	48.4	48.4	48.4	51.7	50.6	55.2

Kv values determined acc. to DIN EN 60534, inlet pressure 5 bar, Δp 1 bar, stainless steel valve body and soft elastomer diaphragm.

The Kv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Kv values may exceed the tolerance limits of the standard. MG = diaphragm size
